

## Measuring Guide

### ➤ STEP ONE

- Use the graph paper on the Page 2 to sketch the shape of the room you are buying cabinets for. Be sure to have a line for each wall, door, and window. (Most kitchens will either be a U, L or single wall galley shape with a peninsula or island).

### ➤ STEP TWO

- First, measure from the floor to the ceiling to determine the maximum cabinet height that can be used. You can record all measurements on Page 3.

### ➤ STEP THREE

- Next you'll need to record the measurement of every wall section on the drawing and Page 3. (A section is considered to be from a corner to a door way or window trim or opening.)

### ➤ STEP FOUR

- Once the wall sections are recorded, measure each door and window from outside edge to outside edge of casing or trim. Remember to Indicate on your sketch how each door swings.

### ➤ STEP FIVE

- The sink's precise location along with other water and gas lines need to be marked on the drawing and Page 3 by indicating where the CENTER of these lines are, not edges.

### ➤ STEP SIX

- Be sure to mark the locations and dimensions of all the appliances will go. (You will need the Width, Height, and Depth of each).

### ➤ STEP SEVEN

- To make sure your cabinets will fit your space, always DOUBLE CHECK YOUR WORK! You can add up all the dimensions of the wall sections, windows, and appliances to be sure it is equal to the total wall measurements. Re-measure where needed!
